

SEARCH REQUEST FORM

Scientific and Technical Information Center

Requester's Full Name: Margaret Eismann Examiner #: 69738 Date: 10/27/04
 Art Unit: 1751 Phone Number 30 2 1311 Serial Number: 10/601599
 Mail Box and Bldg/Room Location: Room 9A49 Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: See attached Bob sheet

Inventors (please provide full names): _____

Earliest Priority Filing Date: _____

**For Sequence Searches Only* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.*

Please search the dye of claim 5 (from ~~the~~ the)
 with ^{CI} Reactive Blue 19, which is dye
1
 $Y = C - C -$ (see definition in cl 1)

Thank you

124:178765 Amination of cellulosic synthetic fibers for dyeing with anionic reactive dyes. Schrell, Andreas; Russ, Werner, Hubert; Huber, Bernd (Hoechst A.-G., Germany). Eur. Pat. Appl. EP 693251 A1 19951122, 16 pp. DESIGNATED STATES: R: AT, CH, DE, FR, GB, IT, LI, SE. (German). CODEN: EPXXDW. APPLICATION: EP 1995-106357 19950427. PRIORITY: DE 1994-4417211 19940517; DE 1994-4421740 19940622.

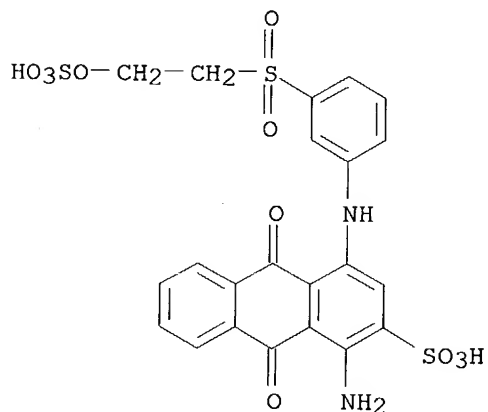

AB The title fibers are spun from a cellulose or viscose solution containing a specified amino compound, e.g., N-(2-sulfatoethyl)piperazine sulfate, ClCH₂CHOHCH₂NMe₃Cl, glycidyltrimethylammonium chloride, etc., as modifying additive. No alkalies or salts are needed for dyeing textiles made of such fibers with anionic reactive dyes.

* STRUCTURE DIAGRAM TOO LARGE FOR DISPLAY - AVAILABLE VIA OFFLINE PRINT *

AB Mixts. of reactive dyes are provided for dyeing or printing cellulosic or
polyamide fibers in various shades. In each case the mixture comprises
90-99.99% of a principal component and 0-10% each of ≤ 4 nuancing
components. Specific combinations of general types of reactive dye, as
specified by Markush structures, are claimed to provide yellow, blue,
navy, red, black, orange, violet, and brown tones. For example, a mixture
of 1000 g I and 4 g II dyed cellulosic fibers blue.

101:92734 Stable aqueous liquid composition of reactive dyes containing β -sulfatoethylsulfonyl groups. Corso, Anthony J. (American Hoechst Corp., USA). U.S. US 4448583 A 19840515, 9 pp. (English). CODEN: USXXAM. APPLICATION: US 1983-468513 19830222.

AB Liquid reactive dye compns. storable at 0-50° for long periods without decomposition to the vinylsulfonyl form consist of 5-45 weight% water-soluble

reactive dye containing 1-3 HO₃SOCH₂CH₂SO₂ groups (or a mixture of such dyes), 0-10 weight% water-soluble inorg. salt, and 45-95 weight% H₂O. The composition has a pH

of 2.5-4.5 and is substantially free of buffer substances. For example, the vinyl sulfone content of an aqueous dye solution containing .apprx.14-18% 4,2,5-HO₃SOCH₂CH₂SO₂(MeO)2C₆H₂N:NCH(COMe)CONHC₆H₂(OMe)(SO₃H)Me-2,4,5 [82391-15-9] and 0-6% inorg. salt and adjusted to pH 4.5 increased only 2.4% when the solution was stored for 105 days at 40°.

AB Disclosed are black disazo dyes I, II, and III ($m, n = 0, 1$; $M = H$, monovalent ion; $X, Y =$ heterocyclic group). The dyes are suitable for water-based jet-printing inks with improved application and image properties. In an example, J-acid was diazotized and coupled with a pyrazole derivative to give a monoazo compound which was then coupled with diazotized 8-aminoquinoline to form a black disazo dye.

140:17592 Bisazo and trisazo copper complex dyes, their production and their use. Pflieger, Dominique (Clariant International Ltd., Switz.). PCT Int. Appl. WO 2003099937 A1 20031204, 25 pp. DESIGNATED STATES: W: AE, AG, AL, AM, AT, AU, AZ, BA, BB, BG, BR, BY, BZ, CA, CH, CN, CO, CR, CU, CZ, DE, DK, DM, DZ, EC, EE, ES, FI, GB, GD, GE, GH, GM, HR, HU, ID, IL, IN, IS, JP, KE, KG, KP, KR, KZ, LC, LK, LR, LS, LT, LU, LV, MA, MD, MG, MK, MN, MW, MX, MZ, NI, NO, NZ, OM, PH, PL, PT, RO, RU, SC, SD, SE, SG, SK, SL, TJ, TM, TN, TR, TT, TZ, UA, UG, US, UZ, VC, VN, YU, ZA, ZM, ZW, AM, AZ, BY, KG, KZ, MD, RU, TJ, TM; RW: AT, BE, BF, BJ, CF, CG, CH, CI, CM, CY, DE, DK, ES, FI, FR, GA, GB, GR, IE, IT, LU, MC, ML, MR, NE, NL, PT,

SE, SN, TD, TG, TR. (English). CODEN: PIXXD2. APPLICATION: WO 2003-IB2154 20030523. PRIORITY: GB 2002-12216 20020528.

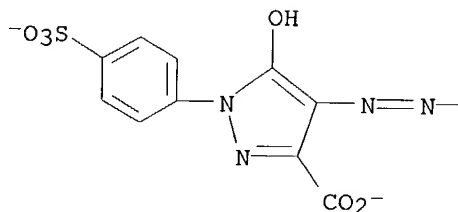

AB This invention relates to coppered bis- or trisazo dyes containing at least two (for bisazo) and at least three (for trisazo) alkyl-, alkoxy-, or arylammonium sulfonate groups or sulfonate groups with Rhodamine B type or Rosin Amine D type counterions. The invention also relates to various intermediates used in the preparation of the metalized dyes, to compns., and to processes for preparing the metalized dyes. The compds. are particularly suited for the application in lacquers. In an example, 4-(6,8-disulfo-2-naphthylazo)-2-methoxyaniline- γ acid was prepared, diazotized, and coupled with 2-naphthol-8-sulfonic acid. The product was complexed with Cu sulfate and neutralized with 3-(2-ethylhexyloxy)-1-propylamine to give a dye.

AB The invention relates to bicomponent mixts. of I (M = H, cation; M1 = metal atom; R1 = hydroxy, hydroxy derivative, vinyl, vinyl precursor; Y = H, alkyl, alkoxy, halogen) and II (R2 = aryl; R3 = organic group; hydroxy or hydroxy derivative, sulfo or sulfo derivative; R4, R5, R6 = H, halogen, organic group, hydroxy or hydroxy derivative, sulfo or sulfo derivative; R7 = organic cyclic

group). These dye mixts. are advantageously used for ink jet printing and provide high light-resisting and neutral black ink formulations. Examples were given which included I (M = Y = H; M1 = Cu; R1 = CH₂CH₂NHCH₂CO₂H) and various disazo dyes as II.

AB Disazo dyes (I, II, III; A, Z = monovalent heterocyclic group bonded to an azo group by a carbon atom of the monovalent heterocyclic group; m, n = 0, 1; M = H, monovalent pos. ion) are provided for use in jet-printing inks. I-III are black dyes with excellent fastness and application properties. In an example, a black dye was prepared using J-acid as the first diazo component, p-(5-hydroxy-3-methyl-1-pyrazolyl)benzenesulfonic acid as the coupling component, and 8-aminoquinoline as the second diazo component.

 111:216123 Use of water-soluble dyes in jet-printing inks, the resulting inks, and some of the dyes. Ritter, Josef; Sieber, Alexander (Hoechst A.-G., Fed. Rep. Ger.). Eur. Pat. Appl. EP 312004 A2 19890419, 19 pp.
 DESIGNATED STATES: R: CH, DE, FR, GB, IT, LI. (German). CODEN: EPXXDW.
 APPLICATION: EP 1988-116922 19881012. PRIORITY: DE 1987-3734528 19871013.

GI

AB Storage-stable, nonclogging, waterborne inks providing highly glossy, water- and light-resistant prints by jet printing contain water-soluble dyes with azo, metalized azo, phthalocyanine, anthraquinone, dioxazine, or Cu-formazan base structure and having 1-4 SO₂X groups, where X = CH:CH₂, CH₂CH₂OR, CH₂CH₂SR, CH₂CH₂NRR₁, or CH₂CH₂NR₂NRR₁ and R-R₂ are H or hydrocarbyl (or NRR₁ may be a heterocyclic ring), and ≥1 SO₃H group. Thus, inks containing diethylene glycol 20, water 79, poly(vinylpyrrolidone) 1, and azo dyes I [X = (CH₂)₂NH(CH₂)₁₅Me, (CH₂)₂N(CH₂CH₂OH)₂, or (CH₂)₂O(CH₂)₂OMe] 4 parts exhibited good performance in 96-h intermittent or continuous use in a xerog. printer using a drop-on-demand process and no precipitate after 1 yr storage and provided glossy magenta print with good water resistance and legibility after 100 h in a xenon Fadeometer.

106:51678 Low-salt, aqueous fiber-reactive dye formulations. Meininger, Fritz; Opitz, Konrad; Semel, Joachim (Hoechst A.-G., Fed. Rep. Ger.). Ger. Offen. DE 3424506 A1 19860109, 22 pp. (German). CODEN: GWXXBX. APPLICATION: DE 1984-3424506 19840704.

GI

I

AB Low-salt-content aqueous compns. of fiber-reactive dyes (MO3S)_mZR_n (M = H, alkali, alkaline earth metal; m = 1-8; n = 1-3; R = fiber-reactive group; Z = anthraquinone, formazan, dioxazine, monoazo, disazo, trisazo, phthalocyanine, or metal complex azo dye residue) contain 0.1-6.0% of ≥1 pH 3-7 buffer, 0.001-1.0% ≥1 alkali or alkaline earth metal halide, and are prepared by electrodialysis. The formulations are useful for dyeing or printing wool, silk, polyamide, and natural and/or regenerated cellulose textiles. Thus, 600 parts of a powdered dye mixture containing KCl 12.9, NaCl 4.1, and I 83% (Cl⁻ content 8.94%) was dissolved in 2400 parts water and charged to an electrodialysis apparatus having a membrane surface area of 814 cm² and operating at 28 V. The anion-exchange membrane was a styrene-butadiene copolymer with quaternary ammonium groups anchored to a PVC resin, and had an exchange capacity of 1.9 equiv/kg, a H₂O content of 19%, and a resistance of 2-4.5 Ω/cm². The cation-exchange membrane was a sulfonated styrene-butadiene copolymer anchored to a PVC resin, and had an exchange capacity of 2.4 equiv/kg, a H₂O content of 25%, and a resistance of 2.9 Ω/cm². Dialysis was continued until there was no further elec. conductivity decrease, for 1-2 h, of the dye solution; this was realized after 16 h. After electrodialysis, 2400 parts of this dye solution had a Cl⁻ content of 0.059%, which was equivalent to a

96.7% chloride reduction The liquid dye preparation was placed in a close container and stored for 3 mo at 20°, 2 wk at 0°, or 6 wk at 50° with no observed change in pH.

AB Na2SO4 is removed from aqueous solns. of anionic or cationic dyes, especially anionic fiber-reactive dyes of monochlorotriazine or sulfatoethylsulfonyl type, containing ≤ 2 weight% chloride, by cooling the solution to a temperature between $+5^\circ$ and -15° and separating, e.g. filtering, the Na2SO4.10H2O which ppts. The aqueous preps. contain < 4 weight% Na2SO4 and are stable during storage at temps. up to 50° and at low temps., e.g. $+5^\circ$ to -5° . For example, 1420 parts synthesis solution containing I 10.33, NaCl 0.14, and Na2SO4 16.3% was stirred and kept at 0° for 8 h, filtered to remove 498 parts precipitated Na2SO4.10H2O, and mixed (922 parts) with NaH2PO4 7, Na2HPO4 7, and H2O 10 parts to give 946 parts solution (pH 6.2) which contained I 15.5, Na2SO4 1.2, and $< 0.22\%$ NaCl and was stable for ≥ 6 mo at 20° , ≥ 6 wk at 50° , and > 2 wk at 0° . The solution could be used to prepare dyebaths, padbaths, or printing pastes.

GI

AB Aqueous reactive dyes, especially those of vinyl sulfone type, are concentrated by a room-temperature membrane separation process which also removes inorg. salts and other impurities. The resultant dye compns. are storage stable and can be used for dyeing and printing of cellulose, wool, etc. Thus, I [87074-89-3] was prepared as a 12% aqueous solution (1500 g) and maintained under 40 bar in a pressure permeation cell (polyamide membrane) for 9 h during which 675 g salt-containing solution passed through the membrane. The 825 g dye solution remaining in the cell contained 22% I and was adjusted to pH 6.0 by addition of Na2HPO4 to give a composition which exhibited good storage stability at 50° and at room temperature and could be used directly in dyebaths, pad baths, or printing pastes.

L19 ANSWER 15 OF 15 HCA COPYRIGHT 2004 ACS on STN

55:62165 Original Reference No. 55:11871c-g Metalized bianisidine dyes.

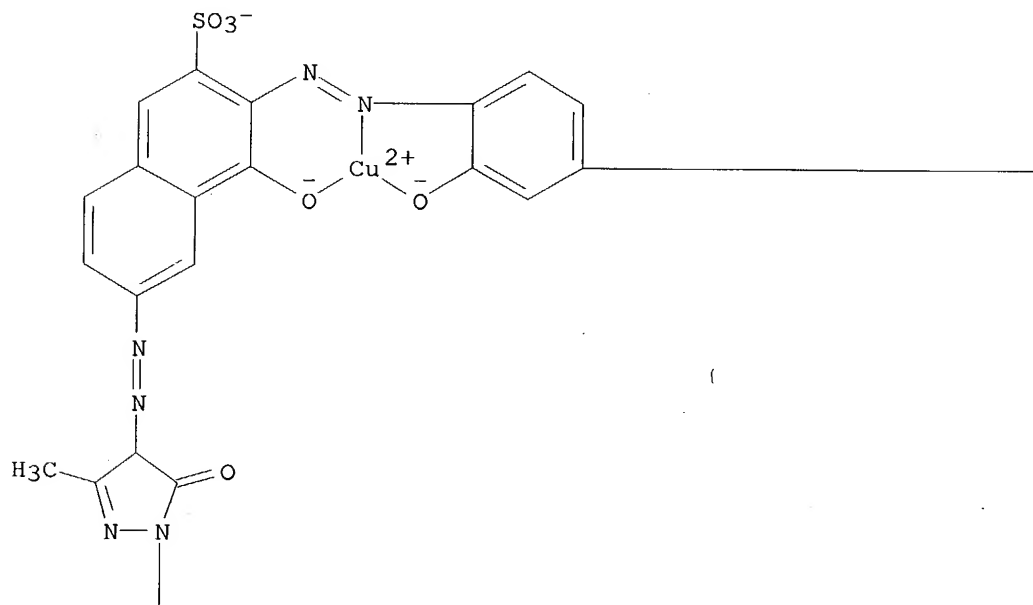

Morgan, Jack F.; Vollmer, David W. (General Aniline & Film Corp.). US 2970993 19610207 (Unavailable). APPLICATION: US .

AB The title compds. (I) yield gray colors directly on cellulosic fibers with exceptional light-fastness and resistance to antiretreatment. I are the di-Cu complexes of polyazo dyes of the general formula HOQN:NAN:NM(OH)N:NX, where Q is the radical of naphthol- or aminonaphtholmono- or disulfonic acid (the adjacent azo group being ortho to the naphtholic OH group); M is the radical of 6- or 7-amino-1-naphtholmono- or disulfonic acid; X is a 5-pyrazolone coupling component, and A is the residue of tetrazotized 4,4'-bi-o-anisidine (II). Thus: 24.4 parts II is tetrazotized, then 25 parts NaHCO₃ is added, followed by the slow addition of a neutral solution of 23.9 parts of 7-amino-1-naphthol-3-sulfonic acid (III) in 200 parts of H₂O. The coupling is immediate and is balanced at the point where no further tetrazotized II remains. The reaction mixture is acidified with 37.1 parts of 20° B.act.e.e. HCl, cooled to 15-20° with ice, and diazotized. The mixture is stirred 1-2 hrs. and adjusted to pH 6 with NaHCO₃. A neutral solution of 22.8 parts 3-methyl-1-(p-sulfophenyl)-5-pyrazolone (IV) in 150 parts H₂O is added over 15-20 min., then a neutral solution of 40 parts 8-amino-1-naphthol-5,7-disulfonic acid (V) in 200 parts of H₂O, followed by immediate addition of a solution of 40 parts of Na₂CO₃ in 200 parts of H₂O. The mixture is stirred for several hrs. to complete the coupling. CuSO₄.5H₂O (62.5 parts) in 46 parts MeNH₂ in 400 parts H₂O is added, and the mixture is heated at 80-5° for 4 hrs. The resulting

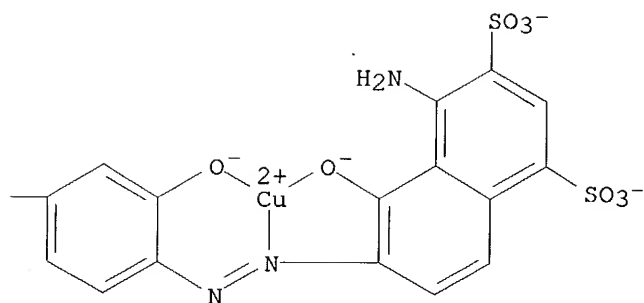

solution is evaporated to dryness to obtain the product which dyes cotton and regenerated cellulose rayon gray shades which are light- and wash-fast. The dyeings also survive conventional anticrease treatment with melamine- and urea-HCHO resins. Similarly, compds. dyeing greenish-gray shades are obtained from the di-Cu complexes of: II, V, III, and 3-methyl-1-phenyl-5-pyrazolone; II, III, 1-phenyl-3-carboxy-5-pyrazolone, and V; II, 7-amino-1-naphthol-3,6-disulfonic acid, IV, and V; 6-amino-1-naphthol-3-sulfonic acid, IV, II, and 8-amino-1-naphthol-3,6-disulfonic acid; and II, 2-naphthol-3,6-disulfonic acid, III, and IV.
